

JEE MAIN REVISION MASTER: SEQUENCES AND SERIES 2026 1 QUESTIONS 1.67% WEIGHTAGE

Subject: Mathematics | Target Scope: JEE Main Previous Years | Empirical Base: 13 Analyzed PYQs

1. High-Yield Concept Priority Matrix

Priority Tier	Concept Name	Frequency	Category
High	Kcet Sequences And Series - Core Application	13 PYQs	General Concept

2. Master Formula Reference Card

Concept / Topic	Mathematical Formulation & Governing Equations
-----------------	--

3. Deep-Dive Concepts & Linked PYQ Evidence

3.1 Kcet Sequences And Series - Core Application (High Yield — 13 PYQs)

Core Principle: Key problem pattern in Kcet Sequences And Series.

■■ Caution / JEE Pitfall: Watch for algebraic and sign errors.

■ Speed Trick: Verify dimensions and boundary conditions.

Representative Source PYQs:

- [2026 Shift] Q#1 (MCQ): "If we insert two numbers between $\sqrt{2}$ and 4 so that the resulting sequence is in G.P, then the inserted numbers in the order are..." [Ans: N/A]
- [2025 Shift] Q#2 (MCQ): "If 4th, 10th and 16th terms of a G.P. are x, y and z respectively, then..." [Ans: N/A]
- [2024 Shift] Q#3 (MCQ): "If $S_n(n)$ stands for sum to n -terms of a GP with a as the first term and r as the common ratio, then $S_n(n):S_{2n}$ is..." [Ans: N/A]

4. Benchmark Illustrative PYQs with Master Solutions

Benchmark Problem 1: KCET 2026 (Q#1)

If we insert two numbers between $\sqrt{2}$ and 4 so that the resulting sequence is in G.P, then the inserted numbers in the order are

- (A) $8, \sqrt{2}$
- (B) $2, \sqrt{8}$
- (C) $\sqrt{8}, 2$
- (D) $\sqrt{2}, 8$

Correct Answer: None

Solution Analysis: The sequence after inserting two numbers will be $\sqrt{2}, x, y, 4$. Since these four terms are in G.P., let the common ratio be r . The first term is $\sqrt{2}$ and the fourth term is 4. For a G.P., the fourth term is ar^3 . So, $\sqrt{2}r^3 = 4$
 $r^3 = \frac{4}{\sqrt{2}}$ Now, $\frac{4}{\sqrt{2}} = \frac{2^2 \cdot 2^{1/2}}{2^{1/2}} = 2^{3/2}$ So, $r^3 = 2^{3/2}$ Taking cube root, $r = 2^{1/2} = \sqrt{2}$ Now the terms are:
 $\sqrt{2}, \sqrt{2} \times \sqrt{2}, 2 \times \sqrt{2}, 4$ So, $x=2$ and $y=\sqrt{8}$ Hence, the inserted numbers in order are $2, \sqrt{8}$ Correct option: Option B.
